## WHAT IS CORAVIN?

The Coravin System uses technology that keeps the cork in the bottle, where it's been since the bottle was sealed. It allows us to pour glasses and know that instead of oxidising, the remaining wine will continue to age naturally.

## ACCESS

A thin, hollow needle is inserted through the cork or silicon screw cap to access the wine.

## PRESSURISE & POUR

The bottle is pressurised with argon, an inert gas that has no effect on the taste profile of wine. The wine then flows through the needle and pours into the glass.

## REMOVE & RESEAL

The needle is removed, and the cork / silicon reseals, protecting the wine from oxidation, enabling us to serve a wine, glass by glass, weeks or months later.
